**Disclaimer:**

This document is a supplement to and should be used in conjunction with the *2019 Houston Area Integrated Epidemiologic Profile for HIV Prevention and Care Services Planning*. (December 2019). This document contains data on selected epidemiological measures of HIV disease for the jurisdictions of Houston/Harris County and the Houston Eligible Metropolitan Area (**EMA**) for the reporting period of January 1 to December 31, 2021 (unless otherwise noted). It is intended for use in HIV prevention and care services planning conducted in years 2023-24. The separation of jurisdictions in the data presentation is intended to enhance the utility of this document as a tool for planning both HIV prevention and HIV care services. Data for the third geographic service jurisdiction in the Houston Area, the Houston Health Services Delivery Area (**HSDA**), are not presented here due to the overlap of data and data sources with the EMA, which makes the data virtually identical. The 2019 Epidemiologic Profile should be referenced for a comprehensive discussion of data pertaining to the epidemiological questions outlined in joint guidance from the Centers for Disease Control and Prevention and the Health Resources and Services Administration. More recent data may have become available since the time of publication.

## EXECUTIVE SUMMARY

Local communities use data on patterns of HIV, or HIV epidemiology, to better understand who is diagnosed and living with HIV. This helps local communities make informed decisions about HIV services, funding, and quality.

This document is a supplement to the Houston Area’s current epidemiological profile of HIV (published in December 2019) and provides updated data on core HIV indicators used in local planning, including new HIV diagnoses and cumulative people living with HIV (HIV prevalence), for the two local jurisdictions of Houston/Harris County and the Houston Eligible Metropolitan Area (**EMA**), a six-county area that includes Houston/Harris County.<sup>1</sup> Data for the year 2020 should be interpreted with caution due to the impact of the COVID-19 pandemic on access to HIV testing, care-related services, and surveillance activities in state/local jurisdictions. A summary of key data is below:

- At the end of calendar year 2020, there were 30,988 diagnosed people living with HIV (**PLWH**) in the Houston EMA, a 2.6% increase from 2019 (2019 total = 30,198). In 2020, 91% of PLWH resided in Houston/Harris County.
- Also, in 2020, 1,019 new diagnoses of HIV were reported in the Houston EMA, a 22% decrease from 2019 (2019 total = 1,313). At the time of diagnosis, 93% resided in Houston/Harris County.

### Number of New HIV Diagnoses and People Living with HIV in the Houston EMA, by County, 2020

Sources: Texas eHARS, as of 12/31/2022

Definitions: New HIV diagnoses = People diagnosed with HIV between 1/1/2020 and 12/31/2020, with residence at diagnosis in Houston EMA. People living with HIV = People living with HIV at the end of calendar year 2020.

- In both Houston/Harris County and the Houston EMA, the rates of new HIV diagnoses and prevalence continue to exceed rates both for Texas and the U.S. The rate of new HIV diagnoses in Houston/Harris County is more than twice the rate for the U.S.
- Compared to the general population in the Houston EMA, PLWH are disproportionately male, Black/African Americans, and ages 45 to 54. There is a larger proportion of people ages 25 to 34 among new HIV diagnoses.
- Among 30,988 HIV-diagnosed individuals in the Houston EMA in 2020, 73% had receipt of care (at least one CD4/VL test in year); 56% were retained in HIV care (at least two CD4/VL tests in year, at least three months apart); and 60% maintained or reached viral load suppression ( $\leq 200$  copies/mL).

<sup>1</sup>Pages marked “EMA” in the top left corner use 2020 Houston EMA HIV prevalence data, and pages marked “H/HC” in the top left corner use 2020 Houston/Harris County HIV prevalence data, unless otherwise noted.

## COMPARISON OF HIV RATES IN HOUSTON, TEXAS, AND THE U.S.

A comparison of core HIV epidemiological indicators between the two Houston area jurisdictions (Houston/Harris County and the Houston EMA), the State of Texas, and the U.S. provides context for the local HIV burden data described in this document.

Overall, both Houston/Harris County and the Houston EMA have higher rates of new HIV diagnoses and HIV prevalence (or PLWH per 100,000 population) than both Texas and the U.S. This indicates that the HIV burden in the Houston area is greater than the state and the nation, even when adjusted for population size. In 2020, the Houston EMA had the highest new HIV diagnoses of any EMA/Transitional Grant Areas in Texas, according to epidemiological data provided by the Texas Department of State Health Services (**TDSHS**).

**Rate of New HIV Diagnoses and of People Living with HIV for the U.S., Texas, and Houston Area Jurisdictions**

\*Rate is per 100,000 population in the respective jurisdiction.

## NEW HIV DIAGNOSES IN HOUSTON/HARRIS COUNTY (H/HC)

In 2020, 951 new diagnoses of HIV disease (including stage 3 HIV/formerly AIDS) were reported in Houston/Harris County, a 23% decrease from 2019 (2019 total = 1,233). Data for the year 2020 should be interpreted with caution due to the impact of the COVID-19 pandemic on access to HIV testing, care-related services, and surveillance activities in state/local jurisdictions. The rate of new HIV and stage 3 HIV diagnoses in Houston/Harris County decreased from 25.9 to 19.9, while the rate of stage 3 HIV was approximately 5 new diagnoses for every 100,000 residents. When compared to 2019, decreases in new HIV rates occurred among all groups.

Proportionally, Black/African Americans made up the majority of new HIV diagnoses in 2020 at 47%, followed by Hispanic/Latinx at 38%. Male-to-male sexual contact or MSM accounted for the most transmission risk at 74%, followed by Sex with male/Sex with female (formerly heterosexual) at 19%.

## COMPARISON OF THE HOUSTON EMA POPULATION TO THE POPULATION LIVING WITH HIV

**By Sex assigned at Birth:** In 2020, the Houston EMA population was divided almost equally between males and females. However, more males than females were both newly diagnosed with HIV (83% vs. 17%) and living with HIV (76% vs. 24%) at the end of 2020.

**By Race/Ethnicity:** Black/African Americans, Hispanic/Latinx, and people of other or multiple races account for 66% of the total Houston EMA population, while these groups comprised 87% of all new HIV diagnoses in 2020 and 83% of all PLWH at the end of 2020. Black/African Americans account for 17% of the total Houston EMA population but comprised 47% of new HIV diagnoses in 2020 and close to half of all PLWH (48%) in the region at the end of 2020.

**By Age:** People ages 25 to 34 accounted for a much larger proportion of new HIV diagnoses (37%) than their share of the Houston EMA population (15%) in 2020. Similarly, people ages 45 to 54 accounted for a much larger proportion of those living with HIV (24%) at the end of 2020 than their share of the population (13%).

## THE HOUSTON EMA HIV CARE CONTINUUM

The Houston EMA HIV Care Continuum depicts the number and percentage of PLWH in Harris, Fort Bend, Waller, Montgomery, Liberty and Chambers counties at each stage of HIV care, from being diagnosed with HIV to viral suppression then linkage to care. Stakeholders use this analysis to measure the extent to which PLWH have community-wide access to care and identify potential service gaps. The methodology follows the CDC definition for a diagnosis-based HIV care continuum.

Among 30,988 HIV-diagnosed individuals in the Houston EMA in 2020, 73% had receipt of care (at least one CD4/VL test in year); 56% were retained in HIV care (at least two CD4/VL tests in year, at least three months apart); and 60% maintained or reached viral load suppression ( $\leq 200$  copies/mL).

**The Houston EMA HIV Care Continuum, 2020**

*Methodology of CDC diagnosis-based HIV Care Continuum:*

HIV Diagnosed: No. of HIV-diagnosed people residing in the Houston EMA, 2020.

Receipt of Care: No. of HIV-diagnosed people who had a care visit as documented by a CD4 or viral load in 2020.

Retained in Care: No. of HIV-diagnosed people who had at least two care visits documented by a CD4 or viral load at least 90 days apart in 2020

Virally Suppressed: No. of HIV-diagnosed people whose last viral load test of the year was  $\leq 200$  copies/mL.

## NEW HIV DIAGNOSES IN HOUSTON/HARRIS COUNTY (H/HC)

In 2021, 1,182 new diagnoses of HIV disease (including stage 3 HIV/formerly AIDS) were reported in Houston/Harris County, an 24% increase from 2020 (2020 total = 951). Data for the year 2020 should be interpreted with caution due to the impact of the COVID-19 pandemic on access to HIV testing, care-related services, and surveillance activities in state/local jurisdictions. The rate of new HIV and stage 3 HIV diagnoses in Houston/Harris County increased from 19.9 to 24.9, while the rate of stage 3 HIV remained approximately 6 new diagnoses for every 100,000 residents. When compared to 2020, increases in new HIV rates occurred among all groups.

Proportionally, Black/African Americans made up the majority of new HIV diagnoses in 2021 at 46%, followed by Hispanic/Latinx at 40%. Male-to-male sexual contact or MSM accounted for the most transmission risk at 72%, followed by Sex with male/Sex with female (formerly heterosexual) at 20%.

	1. Length of waiting time (in weeks) for an appointment for a <b>new</b> client:	1-2weeks	0-1 week	The demand for same-day appointments for new patients is rising steadily. Daily, newly diagnosed or out-of-care patients are linked to care, but we still have a limited number of same-day appointment spaces for new patients. Each month, we see an average of 20 to 25 new patients or return to care patients. With additional funding, we could lower new patient appointment wait times from the current 1-2 weeks to 0-1 week. We are currently holding \$859,005.14 in unbilled services that we are unable to bill for.
