OVERALL SERVICE NEEDS AND BARRIERS

As payer of last resort, the Ryan White HIV/AIDS Program provides a spectrum of HIV-related services to people living with HIV (**PLWH**) who may not have sufficient resources for managing HIV disease. The Houston Area HIV Services Ryan White Planning Council identifies, designs, and allocates funding to locally-provided HIV care services. Housing services for PLWH are provided through the federal Housing Opportunities for People with AIDS (**HOPWA**) program through the City of Houston Housing and Community Development Department. The primary function of HIV needs assessment activities is to gather information about the need for and barriers to services funded by the local Houston Ryan White HIV/AIDS Program, as well as other HIV-related programs like HOPWA and the Houston Health Department's (**HHD**) prevention program.

Overall Ranking of Funded Services, by Need

In 2016, 15 HIV core medical and support services were funded through the Houston Area Ryan White HIV/AIDS Program, and housing services were provided through the local HOPWA program. Though no longer funded through the Ryan White HIV/AIDS Program, Food Pantry was also assessed. Participants of the 2016 Houston HIV Care Services Needs Assessment were asked to indicate which of these funded services they needed in the past 12 months.

(**Graph 1**) All funded services except hospice and linguistics were analyzed and received a ranking of need. At 94%, primary care was the most needed funded service in the Houston Area, followed by case management at 83%, local medication assistance at 74%, and oral health care at 73%. Primary care had the highest need ranking of any core medical service, while transportation received the highest need ranking of any support service. Compared to the last Houston Area HIV needs assessment conducted in 2014, need ranking increased for many core medical services, and decreased for most support services. The percent of needs assessment participants reporting need for a particular service decreased the most for food pantry, housing, and medical nutrition therapy, while the percent of those indicating a need for health insurance assistance increased 12 percentage points from 2014, the most of any service measured.

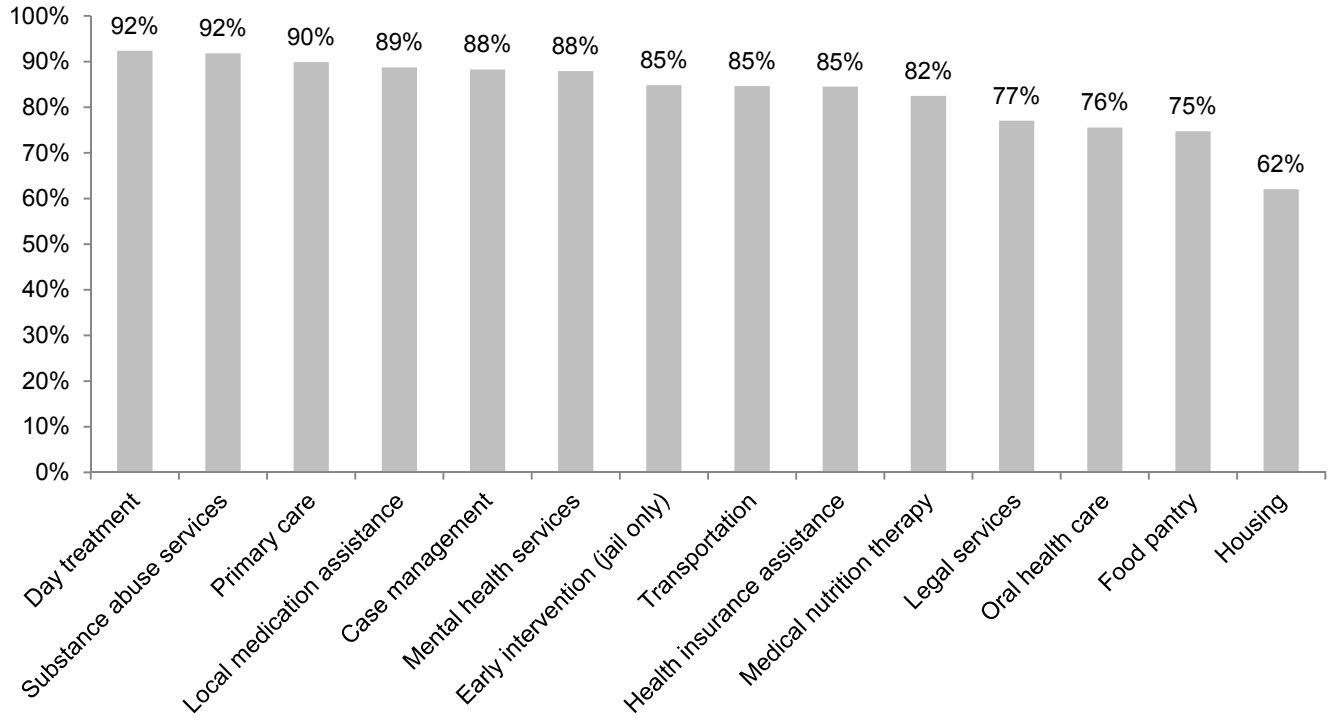
Overall Ranking of Funded Services, by Accessibility

Participants of the 2016 Houston HIV Care Services Needs Assessment were asked to indicate if each of the funded Ryan White HIV/AIDS Program services they needed in the past 12 months was easy or difficult for them to access. If difficulty was reported, participants were then asked to provide a brief description on the barrier experienced. Results for both topics are presented below.

(**Graph 2**) All funded services except hospice and linguistics were analyzed and received a ranking of accessibility. The two most accessible services were day treatment and substance abuse services at 92% ease of access, followed by primary care at 90% and local medication assistance at 89%. Day treatment had the highest accessibility ranking of any core medical service, while transportation received the highest accessibility ranking of any support service. Compared 2014 needs assessment, reported accessibility increased for each service category, with an average increase of 9 percentage points. The greatest increase in percent of participants reporting ease of access was observed in early intervention services, while transportation experienced the lowest increase in accessibility.

GRAPH 2-Ranking of HIV Services in the Houston Area, By Accessibility, 2016

Definition: Of needs assessment participants stating they needed the service in the past 12 months, the percent stating it was easy to access the service.



Overall Ranking of Barriers Types Experienced by Consumers

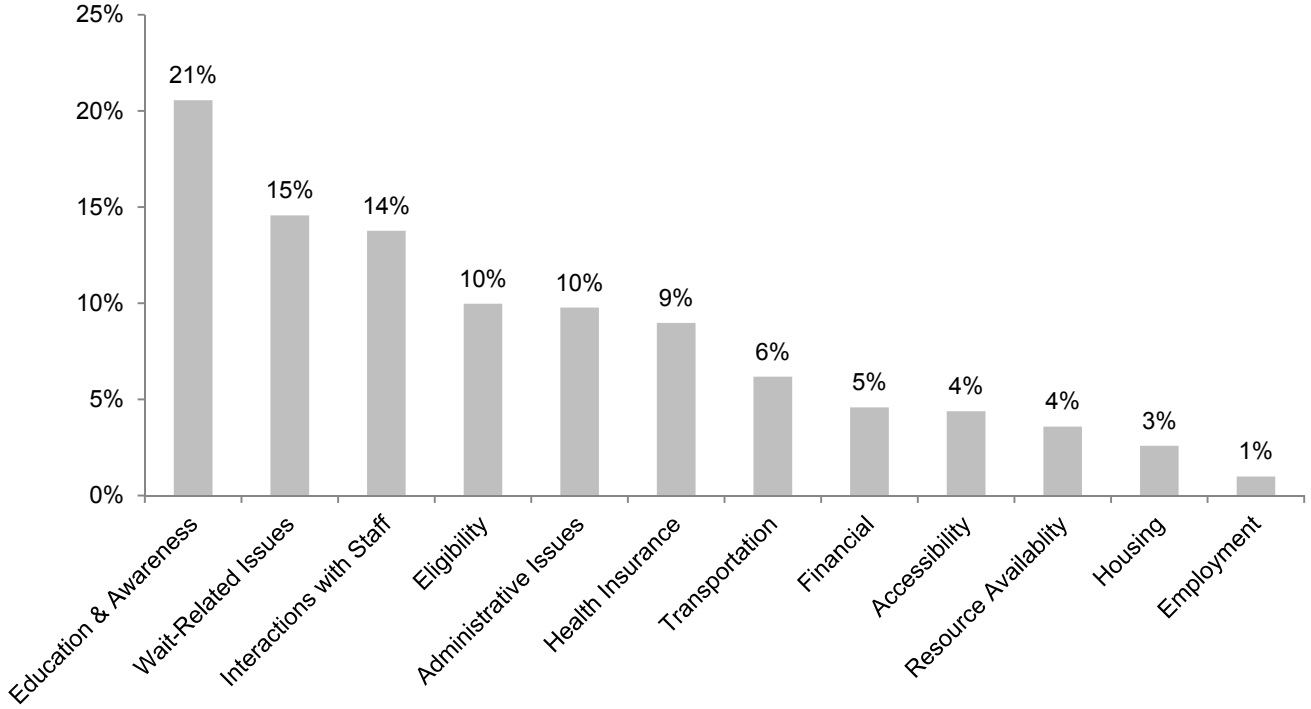
For the first time in the Houston Area HIV Needs Assessment process, participants who reported *difficulty* accessing needed services were asked to provide a brief description of the barrier or barriers encountered, rather than select from a list of pre-selected barriers. Recursive abstraction was used to categorize participant descriptions into 39 distinct barriers. These barriers were then grouped together into 12 nodes, or barrier types.

(**Graph 3**) Overall, the barrier types reported most often related to service education and awareness issues (21% of all reported barriers); wait-related issues (15%); interactions with staff (14%); eligibility issues (10%); and administrative issues (10%). Employment concerns were reported least often (1%). Due to the change in methodology for barrier assessment between the 2014 and 2016 HIV needs assessments, a comparison of the change in number of reports of barriers will not be available until the next HIV needs assessment.

For more information on barrier types reported most often by service category, please see the Service-Specific Fact Sheets.

GRAPH 3-Ranking of Types of Barriers to HIV Services in the Houston Area, 2016

Definition: Percent of times each barrier type was reported by needs assessment participants, regardless of service, when difficulty accessing needed services was reported.



Descriptions of Barriers Encountered

All funded services were reported to have barriers, with an average of 33 reports of barriers per service. Participants reported the least barriers for Hospice (two barriers) and the most barriers for Oral Health Care (86 barriers). In total, 525 reports of barriers across all services were indicated in the sample.

(**Table 1**) Within education and awareness, knowledge of the availability of the service and where to go to access the service accounted for 82% barriers reported. Being put on a waitlist accounted for a majority (66%) of wait-related issues barriers. Poor communication and/or follow up from staff members when contacting participants comprised a majority (51%) of barriers related to staff interactions. Almost all (86%) of eligibility barriers related to participants being told they did not meet eligibly requirements to receive the service or difficulty obtaining the required documentation to establish eligibility. Among administrative issues, long or complex processes required to obtain services sufficient to create a burden to access comprised most (59%) the barriers reported.

Most (84%) of health insurance-related barriers occurred because the participant was uninsured or underinsured and experiencing coverage gaps for needed services or medications. The largest proportion (81%) of transportation-related barriers occurred when participants had no access to transportation. It is notable that multiple participants reported losing bus cards and the difficulty of replacing the cards presented a barrier to accessing other services. Inability to afford the service accounted for all barriers relating to participant financial resources. The service being offered at a distance that was inaccessible to participants or being recently released from incarceration accounted for most (77%) of accessibility-related barriers, though it is worth note that low or no literacy accounted for 14% of accessibility-related barriers. Receiving resources that were insufficient to meet participant needs accounted for most resource availability barriers. Homelessness accounted for virtually all housing-related barriers. Instances in which the participant's employer did not provide sufficient sick/wellness leave for attend appointments comprised most (60%) employment-related barriers.

TABLE 1-Barrier Proportions within Each Barrier Type, 2016					
Education & Awareness	%	Wait-Related Issues	%	Interactions with Staff	%
Availability (Didn't know the service was available)	50%	**Waitlist** (Put on a waitlist)	66%	**Communication** (Poor correspondence/ Follow up from staff)	51%
Definition (Didn't know what service entails)	7%	**Unavailable** (Waitlist full/not available resulting in client not being placed on waitlist)	15%	**Poor Treatment** (Staff insensitive to clients)	17%
Location (Didn't know where to go [location or location w/in agency])	32%	**Wait at Appointment** (Appointment visits take long)	7%	**Resistance** (Staff refusal/ resistance to assist clients)	13%
Contact (Didn't know who to contact for service)	11%	**Approval** (Long durations between application and approval)	12%	**Staff Knowledge** (Staff has no/ limited knowledge of service)	7%
				Referral (Received service referral to provider that did not meet client needs)	17%
Eligibility	%	Administrative Issues	%	Health Insurance	%
Ineligible (Did not meet eligibility requirements)	48%	**Staff Changes** (Change in staff w/o notice)	12%	**Uninsured** (Client has no insurance)	53%
Eligibility Process (Redundant process for renewing eligibility)	16%	**Understaffing** (Shortage of staff)	2%	**Coverage Gaps** (Certain services/medications not covered)	31%
Documentation (Problems obtaining documentation needed for eligibility)	38%	**Service Change** (Change in service w/o notice)	10%	**Locating Provider** (Difficulty locating provider that takes insurance)	13%
		Complex Process (Burden of long complex process for accessing services)	59%	**ACA** (Problems with ACA enrollment process)	17%
		Dismissal (Client dismissal from agency)	4%		
		Hours (Problem with agency hours of operation)	16%		
Transportation		Financial	%	Accessibility	%
No Transportation (No or limited transportation options)	81%	**Financial Resources** (Could not afford service)	100%	**Literacy** (Cannot read/difficulty reading)	14%
Providers (Problems with special transportation providers such as Metrolift or Medicaid transportation)	19%			**Spanish Services** (Services not made available in Spanish)	9%
				Released from Incarceration (Restricted from services due to probation, parole, or felon status)	32%
				Distance (Service not offered within accessible distance)	45%
Resource Availability	%	Housing	%	Employment	%
Insufficient (Resources offered insufficient for meeting need)	56%	**Homeless** (Client is without stable housing)	100%	**Unemployed** (Client is unemployed)	40%
Quality (Resource quality was poor)	44%	**IPV** (Interpersonal domestic issues make housing situation unsafe)	0%	**Leave** (Employer does not provide sick/wellness leave for appointments)	60%

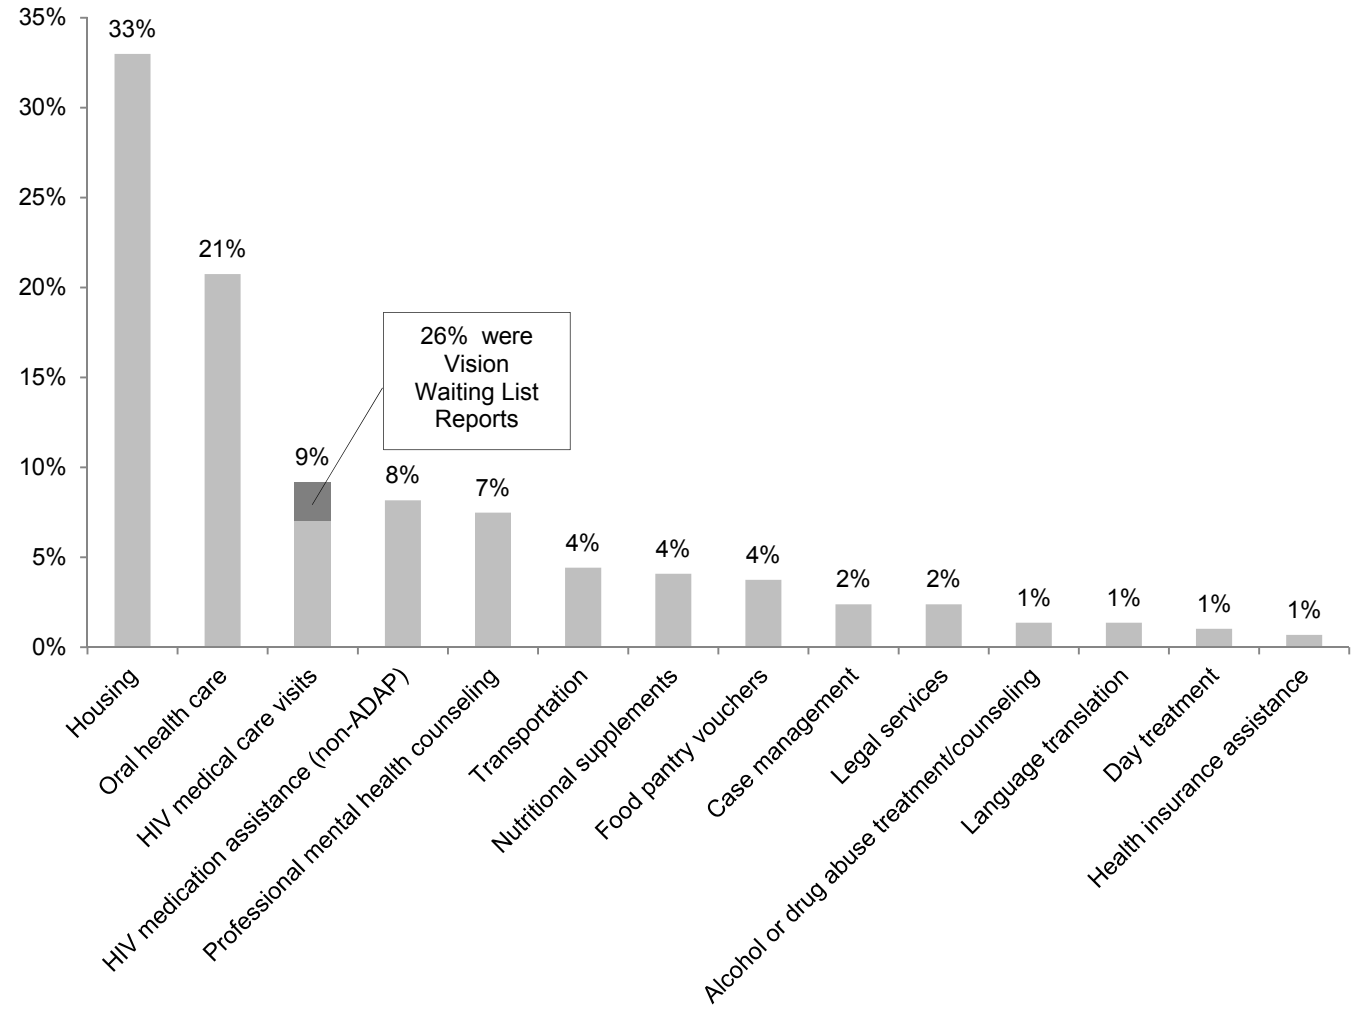
Waiting List Barriers and Experiences

In February 2014, the Ryan White Planning Council formed the ad-hoc Waiting List Workgroup to evaluate the extent to which waiting and waitlists impact the receipt of HIV care and treatment services in the Houston Area, and propose ways to address wait-related issues through changes to the HIV care and treatment system. With input from the Waiting List Workgroup, the 2016 Houston HIV Care Services Needs Assessment included questions specifically designed to elicit information from participants about which services they had been placed on a waiting list for in the past 12 months, the time period between first request for a service and eventual receipt of the service, awareness of other providers of waitlisted services, and services for which clients reported being placed on a waitlist more than once. Thirty-nine percent (39%) of participants indicated that they had been placed on a waiting list for at least one service in the past 12 months.

(**Graph 4**) A third of participant reports of being on a waiting list were for housing services. This was followed by oral health care (21%), HIV medical care (9%), local medication assistance (8%), and professional mental health counseling (7%). Of all participants reporting being on a wait list for HIV medical care visits, 26% indicated being placed on a waiting list specifically for vision services. There were no reports of participants being placed on a wait list for hospice or pre-discharge planning.

GRAPH 4-Percentage of Waiting List Reports by Service, 2016

Definition: Percent of times needs assessment participants reported being on a waiting list for each service.

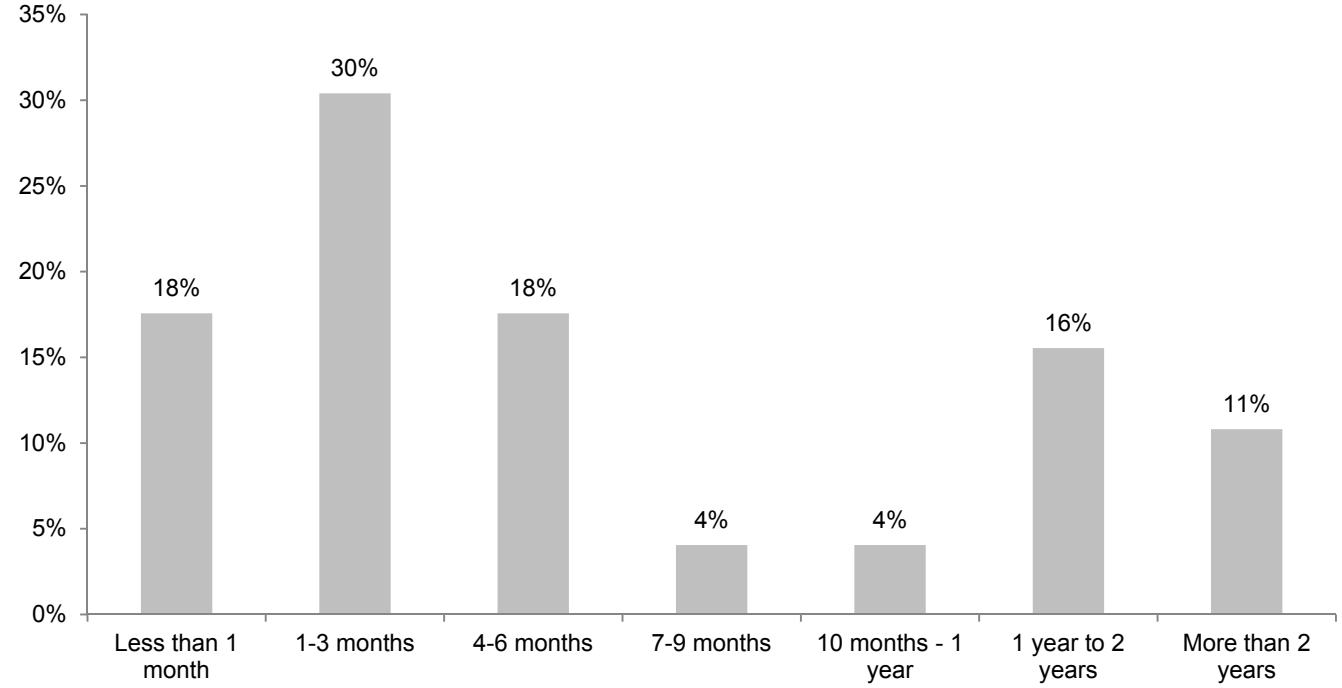


(**Graph 5**) Participant reports of time elapsed from the initial request for a service until receipt of the service vary from 1 day to over 2 years. The greatest number of reports of time elapsed occurred for wait times between one and three months (30%), followed by less than one month (18%) and four to six months 18%).

Most wait times reported for housing services occurred for one to three months (26%), one to two years (26%), or 10 months to one year (18%). It is worth noting that 8% of participants reporting a wait time for housing services had over two years elapse between first request and receipt of service, with several expressing that they were on a housing wait list at the time of survey. Most reports of wait times for oral health care were less than one month (26%) or four to six months (26%). However, 14% of participants indicating a wait time for oral health care services reported wait times of over one year. Finally, most participants (64%) indicating wait times for HIV medical care including vision services reported waiting one to three months.

GRAPH 5-Percentage of Wait Times Reports, 2016

Definition: Percent of times needs assessment participants reported time elapsed from the initial request for a service until receipt of the service each time period.



Awareness of other providers for services operating waiting lists can offer timely service to consumers with acute needs and reduce wait times for those remaining on wait lists. A majority (83%) of participants who reported being on a wait list for at least one in the past 12 months stated that they were not aware of another provider of the service for which they were waiting, or did not remember if they were aware of another provider. Of the remaining 35% of participants who were aware of another provider, over half (59%) reported not seeking service from the alternative provider.

Nearly one-third of participants who reported being placed on a wait list in the past 12 months also reported having been placed on a wait list for the service more than once. This was observed primarily for among participants reporting being placed on a wait list for housing services (34%) and oral health care (29%).

Other Identified Needs

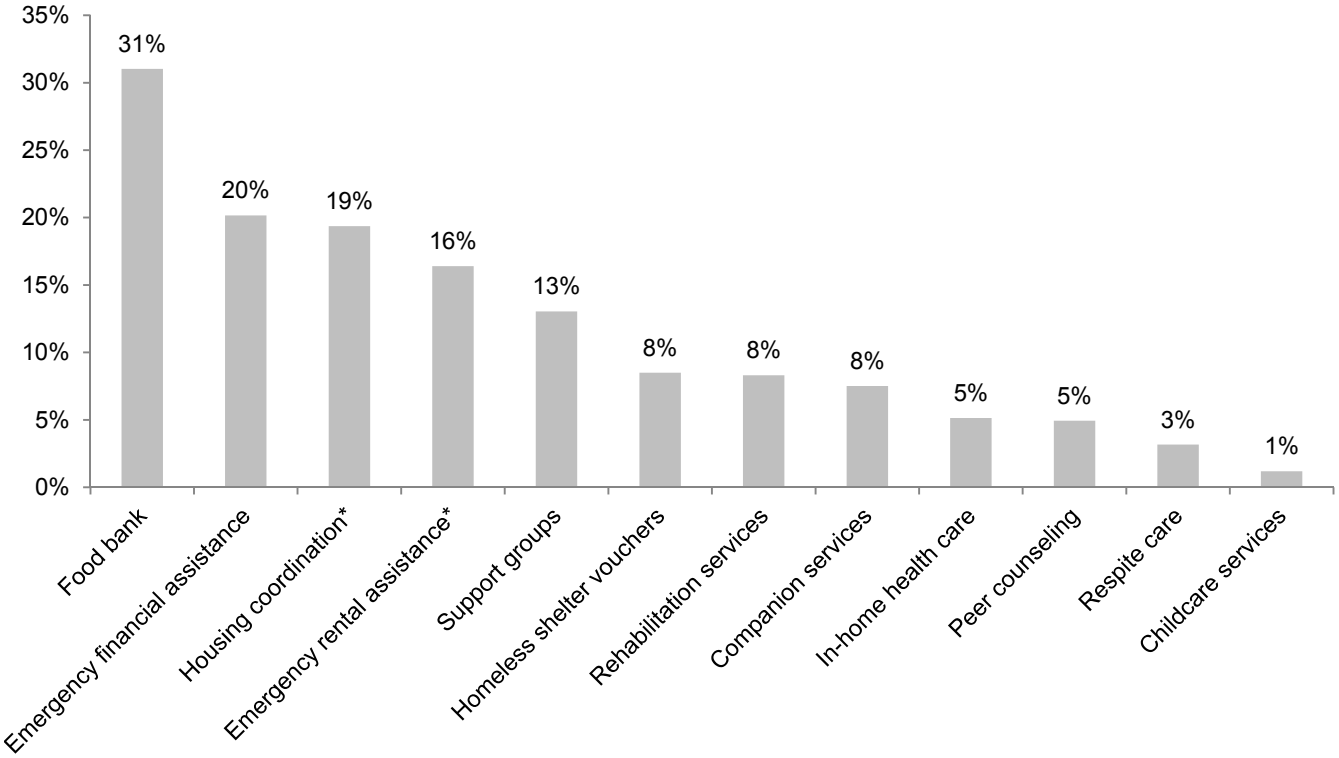
In addition to the HIV services listed above, there are other services allowable for funding by the Ryan White HIV/AIDS Program in local communities if there is a demonstrated need. Several of these other services have been funded by the Ryan White Program in the Houston Area in the past. The 2016 Houston HIV Care Services Needs Assessment measured the need for these services to order to gauge any new or emerging service needs in the community. In addition, some of these services are currently funded through other HIV-specific non-Ryan White sources, namely housing-related services provided by the Housing Opportunities with People with AIDS (HOPWA) program, as indicated.

(**Graph 6**) Twelve other/non-Ryan White funded HIV-related services were assessed to determine emerging needs for Houston Area PLWH. Participants were also encouraged to write-in other types of needed services. Of the 12 services options provided, 31% of participant selected food bank was needed services, a decrease of 14 percentage points from the 2014 needs assessment. Emergency financial assistance was selected second (20%), followed by housing-related services cited third (20%) and fourth (16%), and support groups cited fifth (13%).

Services that were written-in most often as a need (and that are not currently funded by Ryan White) were (*in order*): employment assistance and job training, vision hardware/glasses, and services for spouses/partners.

GRAPH 6-Other Needs for HIV Services in the Houston Area, 2016

Definition: Percent of needs assessment participants, who selected each service in response to the survey question, "What other kinds of services do you need to help you get your HIV medical care?"



*These services are not currently funded by the Ryan White program; however, they are available through the Housing Opportunities for People with AIDS (HOPWA) program.
